

Set up FTP user name and password on server.

here is our completed network.

Currently we have a server which we can ping to and from. it's no use just like this.

Let's do more with it.

First click on my room pc > go to desktop > open the web browser.

This is the web browser

Wow looks worse than internet explorer, didn't think that was possible but it will have to do for now.

In the address bar enter the IP address for the server **192.168.1.254**

once you press go or enter you will see this screen which says Cisco Packet Tracer. This is our home page on the server.

We will customise it later on. Patience young one :)

Its working that's good. Close the browser for now and try it on the other two PCs.

First we will need to create a FTP account on the which allows us to upload and download files from the sever.

**FTP stands for File Transfer Protocol.**

Similar to the PC server has its own Apps and services installed let's check them out.

Click on the server

Click on the services tab on the top

You will see that it has many different services available on the server.

Click on FTP which is the last one on the list.

We will create a new user and password for us.

Username - mooict

Password - student

You will notice that it has Write, Read, Delete, Rename and list check buttons below the user name boxes.

Check write and read

Click on Add

more tutorials on [www.mooict.com](http://www.mooict.com)

now the new user name is added as the second user in the list.

test the ftp on one of the computers connected to the network.

close the config screen click on the work pc

go to desktop > command prompt

type ftp 192.168.1.254 and press enter

it will ask for the user name

more tutorials on [www.mooict.com](http://www.mooict.com)

enter mooict

now it will ask for the password

enter student

type slowly on the password because for security reason it doesn't show when password is being entered.

Now you are logged in the server.

To check

You created a FTP on your sever

You created a User Space on your Server

You created user account on server.

more tutorials on [www.mooict.com](http://www.mooict.com)

to exit from the ftp MODE

type quit and press enter

Now you can try making your user name and password and test it.
